**FEEDBACK FROM REFLECTION GROUPS ON TABLOO**

Before visiting Tabloo and after the presentation from Geert Sannen, Tabloo coordinator, participants were asked by Tanja Perko (SCK CEN) to reflect on things that they would take to their home country, things they would adapt or modify and things they would leave behind. The groups needed to justify why. The results are summarized in the table below.

| | Take it | Adapt it | Leave behind |
|---|---|---|---|
| Bulgaria | We like the periodic table and will try to make it at home (with applications by radionuclide)<br>The community can use the building and the link of Tabloo with the community<br>Making it a table for future generations | Decommissioning<br>Bulgaria is missing in the globe in the exhibition – this needs to be checked! | We like it a lot |
| Hungary | High technical equipment<br>Information database very rich<br>Idea to have a community centre before construction<br><br>i | Not persuade people to accept nuclear;<br>Multifunctional building<br>Playground for children, park<br>Places with rest areas during exhibition | Too much information; less time to look everything |
| Spain | Immersive experience with the sofa and screen and effects<br>Social intergenerational centre for all ages; multifunctional<br>Public funding (to come from ENRESA)<br>Commitment | Make it more sustainable (solar panels) | Not sure about accessibility or what happens if there is a blackout |
| International group | The funds<br>Space for culture, events, specially self hosted | Add a cycling path and pump track (although there is already a skating park) | Not talk about nuclear final disposal |

| | | | |
|---|---|---|---|
| | The idea that nuclear waste should be taken care of, regardless of your position on nuclear power.<br>Hands on learning space that makes complex topics seem welcoming in terms of education for school, etc<br>The idea of a welcoming place where people can meet, learn and openly discuss nuclear. Both the concept and the building are impressive | Closer to the town<br>Add tools for emotional connection that works maybe in other contexts | Not a con but an alternative: the centre could be multiple buildings spread through the town<br>Self-assurance about a solution for high level waste |
